

PROJECT: Implement Client Script & UI Policy – Incident

1. Ideation Phase

Purpose

To identify the problem in the ServiceNow Incident form and propose a solution using Client Scripts and UI Policies.

Problem Statement

Incident users may enter incomplete or unsuitable information. Some fields may need to become mandatory, visible, read-only, or editable depending on selected Incident values.

Proposed Solution

Implement UI Policies for field visibility, mandatory and read-only control, and Client Scripts for dynamic validation and client-side field logic.

Expected Benefits

Improved data quality, fewer user errors, faster incident creation, consistent form behaviour, and better user experience.

Deliverable

A clearly defined project idea, problem statement, proposed solution, and project scope.
