

PROJECT: Implement Client Script & UI Policy – Incident

2. Requirement Analysis

Functional Requirements

The Incident form must respond to selected field values. Required fields should be enforced where necessary. Fields should be shown, hidden, made read-only, or editable based on conditions. Client-side validation should prevent invalid input.

Non-Functional Requirements

The solution should be simple, maintainable, user-friendly, and should not negatively affect form performance.

User Requirements

Users should receive immediate feedback when entering incorrect or incomplete Incident information.

Technical Requirements

ServiceNow Incident table/form, UI Policy, UI Policy Actions, Client Script, browser, and a suitable development/test instance.

Deliverable

A complete list of functional, non-functional, user, and technical requirements.
