

PROJECT: Implement Client Script & UI Policy – Incident

5. Project Development Phase

Step 1 – UI Policy

Create a UI Policy on the Incident table. Define the required condition and configure UI Policy Actions for the affected fields.

Step 2 – Client Script

Create the appropriate Client Script type. Use onChange when behaviour depends on a field change, onLoad for form-load logic, and onSubmit for validation.

Step 3 – Validation

Test the Incident form by entering valid and invalid information and verify that the configured behaviour occurs.

Step 4 – Fix and Retest

Resolve script errors or configuration conflicts and repeat the test cases until the expected result is obtained.

Deliverable

A working Client Script and UI Policy implementation on the Incident form.
