

PROJECT: Implement Client Script & UI Policy – Incident

7. Project Demonstration

Demonstration Sequence

Introduce the project, explain the problem and objective, show the Incident form, demonstrate the UI Policy, demonstrate the Client Script, show valid and invalid test cases, and explain the final result.

Demo Example

Open an Incident → select the relevant field value → show the UI Policy changing field properties → enter an invalid value if applicable → show Client Script validation → correct the value → submit successfully.

Expected Outcome

The audience should see that the Incident form responds automatically to user actions and that incorrect or incomplete information is handled before submission.

Conclusion

The project demonstrates how ServiceNow Client Scripts and UI Policies can be combined to create a controlled, consistent, and user-friendly Incident form.

Deliverable

Final live demonstration and project presentation.
